## Timeline

## Writing

Hieroglyphs were written by scribes, who had to go to a special school to learn how to write. Almost all scribes were men, although there is some evidence of female doctors being able to read hieroglyphs in medical texts.

Hieroglyphs were used for religious texts and inscriptions on statues and tombs. They were also used for counting crops and animals so that the right taxes could be taken.

The Rosetta Stone, discovered in 1799, was written in hieroglyphs and two other languages, including ancient Greek, which linguists (language experts) could still read.

Linguists translated the hieroglyphs by comparing the languages. It took 20 years to translate all the text into modern language.

## The Nile

The river Nile was essential to life in ancient Egypt. Every year, it flooded, leaving behind a black silt that enriched the soil for growing crops. The river was also used to irrigate fields in other areas.

Most people lived along and around the Nile. This is still true in Egypt today. The river was used for water, fishing and trade. Mud from the river was used for bricks and papyrus plants were used to make paper.
